

Manual Testing

Testing Feature: Sending Verification code to email.

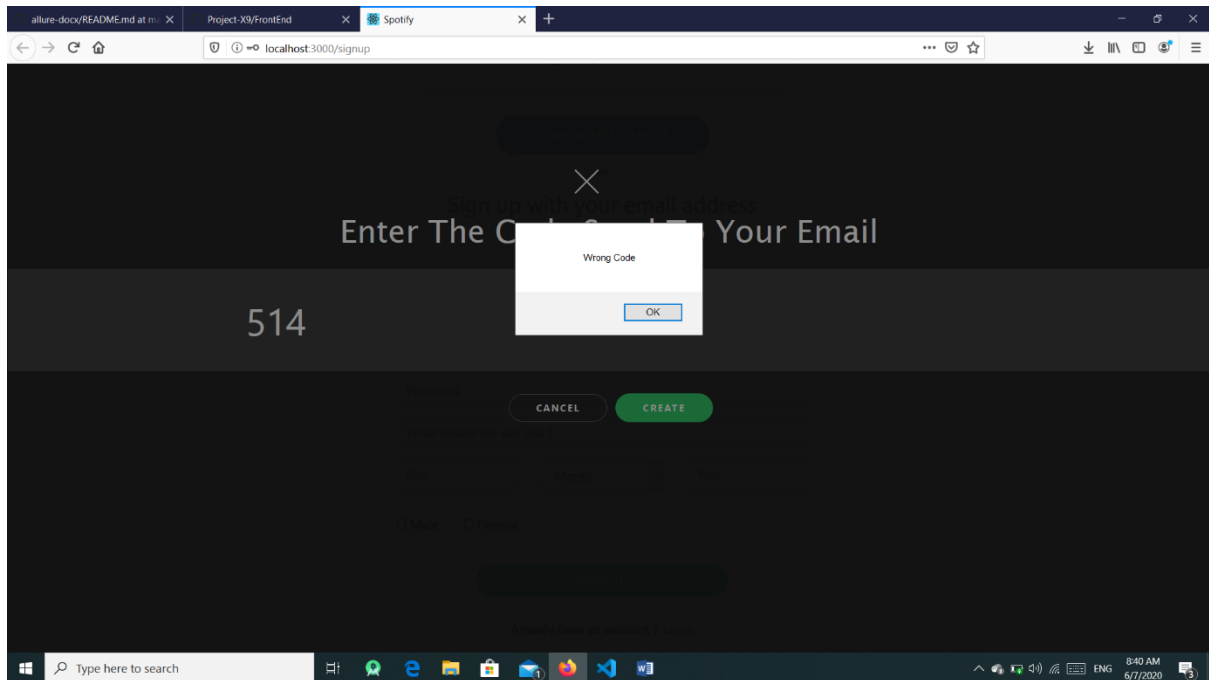

Test Case 1: Sending Code to email, PASSED

A code has been sent to my email

Test Case 2: Typing the wrong code, PASSED

Typing the wrong code show alert with error

Test Case 3: Typing Correct code, **FAILED**

Typing the correct code shows a different message (not the regular error message) but it is not indicating the correct description of the message, mysterious message. The user is not signed up after this operation. (signing in fails even after typing the correct code)
